

JUNG

JUNG HOME. JUST SMART.

EN

Attractive. Smart. In your home.

Do you want more convenience and safety in your home? Would you like to use energy more efficiently, reduce your energy costs and help protect the environment? JUNG HOME helps you to realise your wishes.

With JUNG HOME, we have developed a simple system to smartify your home. It is based on the 230 volt installation that is already installed in your home. Only the existing switches and sockets are replaced by smart JUNG HOME products.

All the JUNG HOME components are securely interconnected via Bluetooth® Mesh and can be controlled via an app on your mobile phone.

Award-winning system

JUNG HOME has already been presented with many national and international awards. We are convinced that you too will be inspired by JUNG HOME.

Intelligent sockets

The smart JUNG HOME SCHUKO® sockets offer many possibilities for switching your connected devices. With a JUNG HOME push-button, via the app or directly at the socket. Moreover the smart socket measures the power consumption of the devices and displays it on your mobile device.

Switch off standby

Many of your electrical devices are permanently connected to a socket and also use power when they are not in use: for example a television, speaker or even an espresso machine. Switching off sockets helps to save power. Via the JUNG HOME app, you can determine which smart sockets should be switched on or off and when.

Beautifully combined

Smart JUNG HOME push-button with 2-gang rocker and smart JUNG HOME SCHUKO® socket Energy in the LS 990 range in the colour bleu céruleen 31 from the colour palette of Les Couleurs® Le Corbusier.

Measure power consumption

The smart socket with measuring function is a clever support for energy management. It measures how much power a connected device uses and displays it in the app. You can thus identify possible energy saving potentials in your home.

Display electricity consumption

The JUNG HOME app displays the electricity consumption of each intelligent socket – either per day or per month.

Attractive exterior. Smart interior.

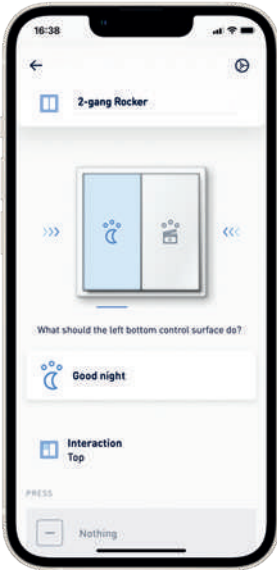

Unlike conventional light switches, JUNG HOME push-buttons are not limited to one function. They can carry out completely different tasks: switching and dimming the light – in the same room or another room. Move blinds and shutters – individually or grouped. Regulate temperature – in the same room or even throughout the house.

Clever switching

The smart JUNG HOME push-buttons can be assigned a different function at any time via the app. The push-buttons with one rocker can be assigned up to two functions while the push-buttons with a twin rocker can be assigned up to four functions. The battery-powered variant which does not need to be wired creates even more flexibility. This push-button can be placed anywhere.

The battery-powered JUNG HOME push-buttons will be available from Q4/2024.

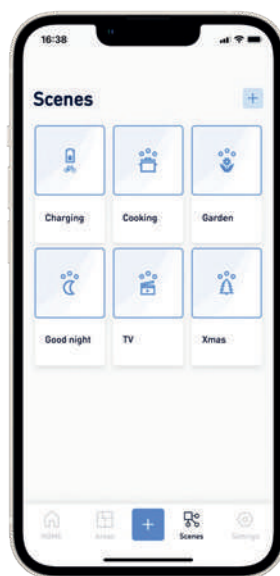

Countless possibilities

With the smart push-buttons, you control all the JUNG HOME functions – for example, you switch all the JUNG HOME sockets on or off.

Create atmosphere

Each moment is individual. JUNG HOME adapts to your personal requirements. Whether it's a get-together in the dining room, a cosy awakening in the bedroom or a relaxing movie night in the living room: "scenes" using light and shading provide the right atmosphere at the touch of a button.

Creating scenes

In the JUNG HOME app, you have the option of combining different functions into a scene. Scenes can be assigned to a push-button.

Comfortable temperature

The regulation of your heating can also be conveniently integrated into the JUNG HOME system. You can set the temperature both via the app and via the JUNG HOME room thermostat display.

Control temperature

Controlling the heating via the JUNG HOME app is particularly practical when you are not in the immediate vicinity of the room thermostat: you can set the right temperature from the sofa.

The mobile thermostat

The heating control can also be integrated into scenes via the JUNG HOME app.

Heat more efficiently

The JUNG HOME room thermostat display combines convenient operation with efficient usage. In addition to manual control, it also works with time programs. There are comfort, eco and frost protection modes available.

Temperature control in switch design

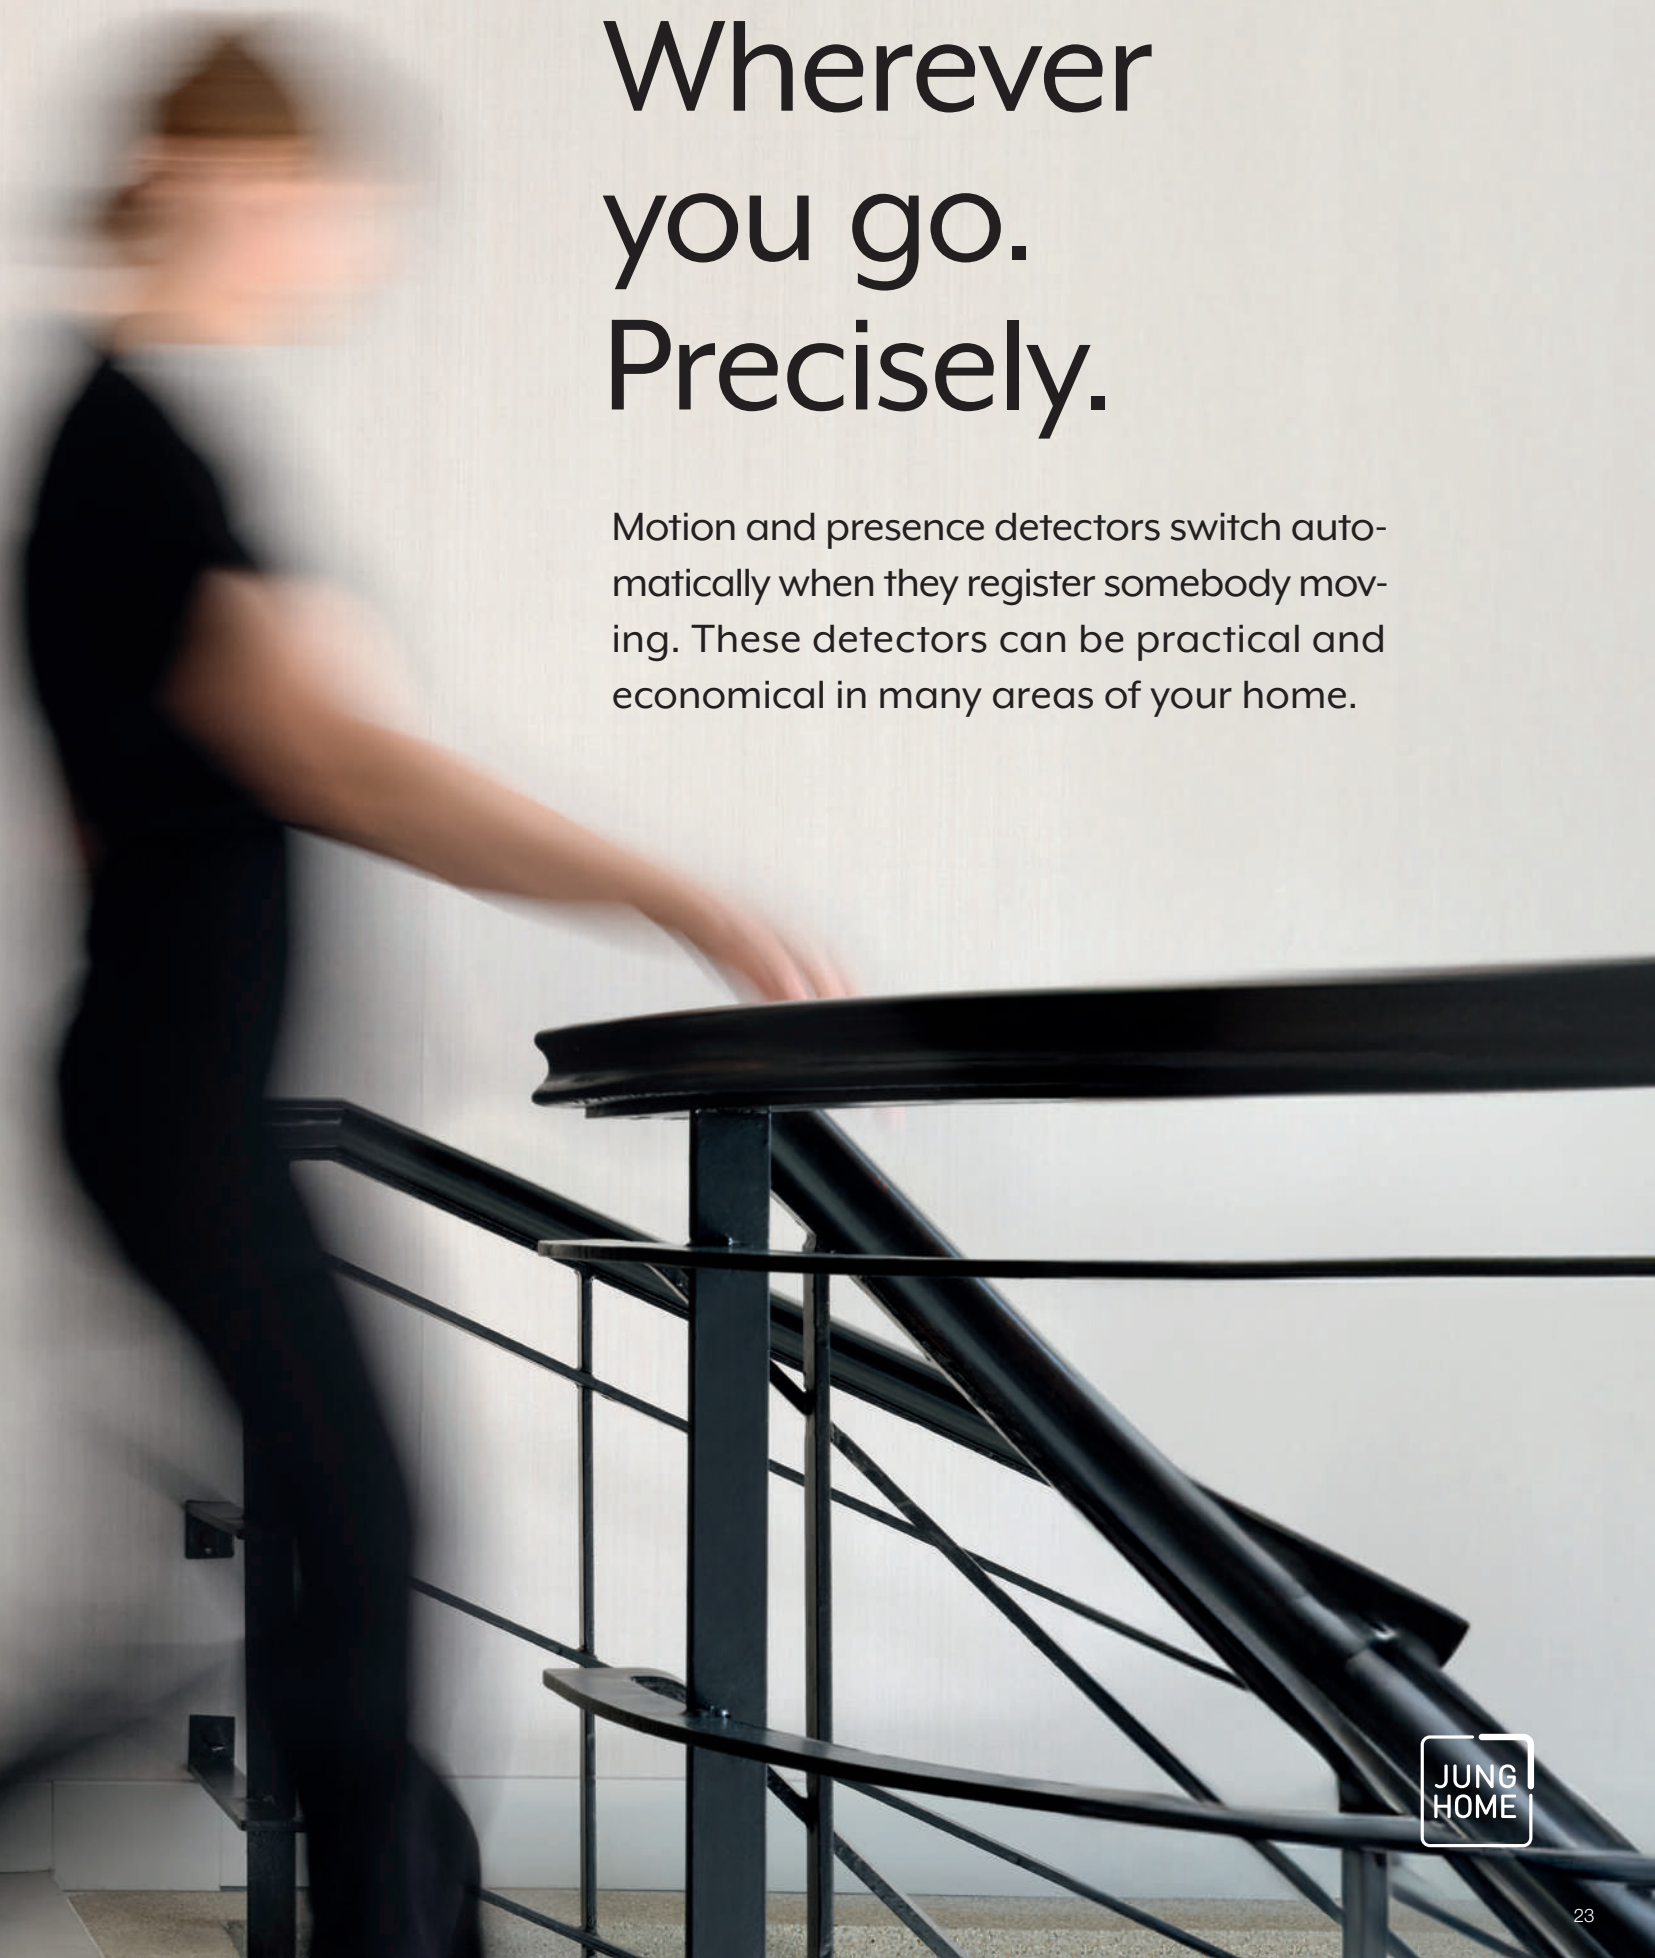

The JUNG HOME room thermostat display with glass front in the A 550 range in white.

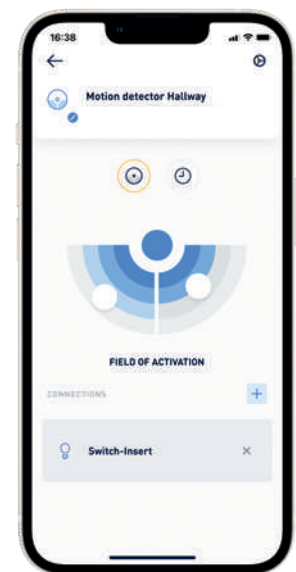

Wherever you go. Precisely.

Motion and presence detectors switch automatically when they register somebody moving. These detectors can be practical and economical in many areas of your home.

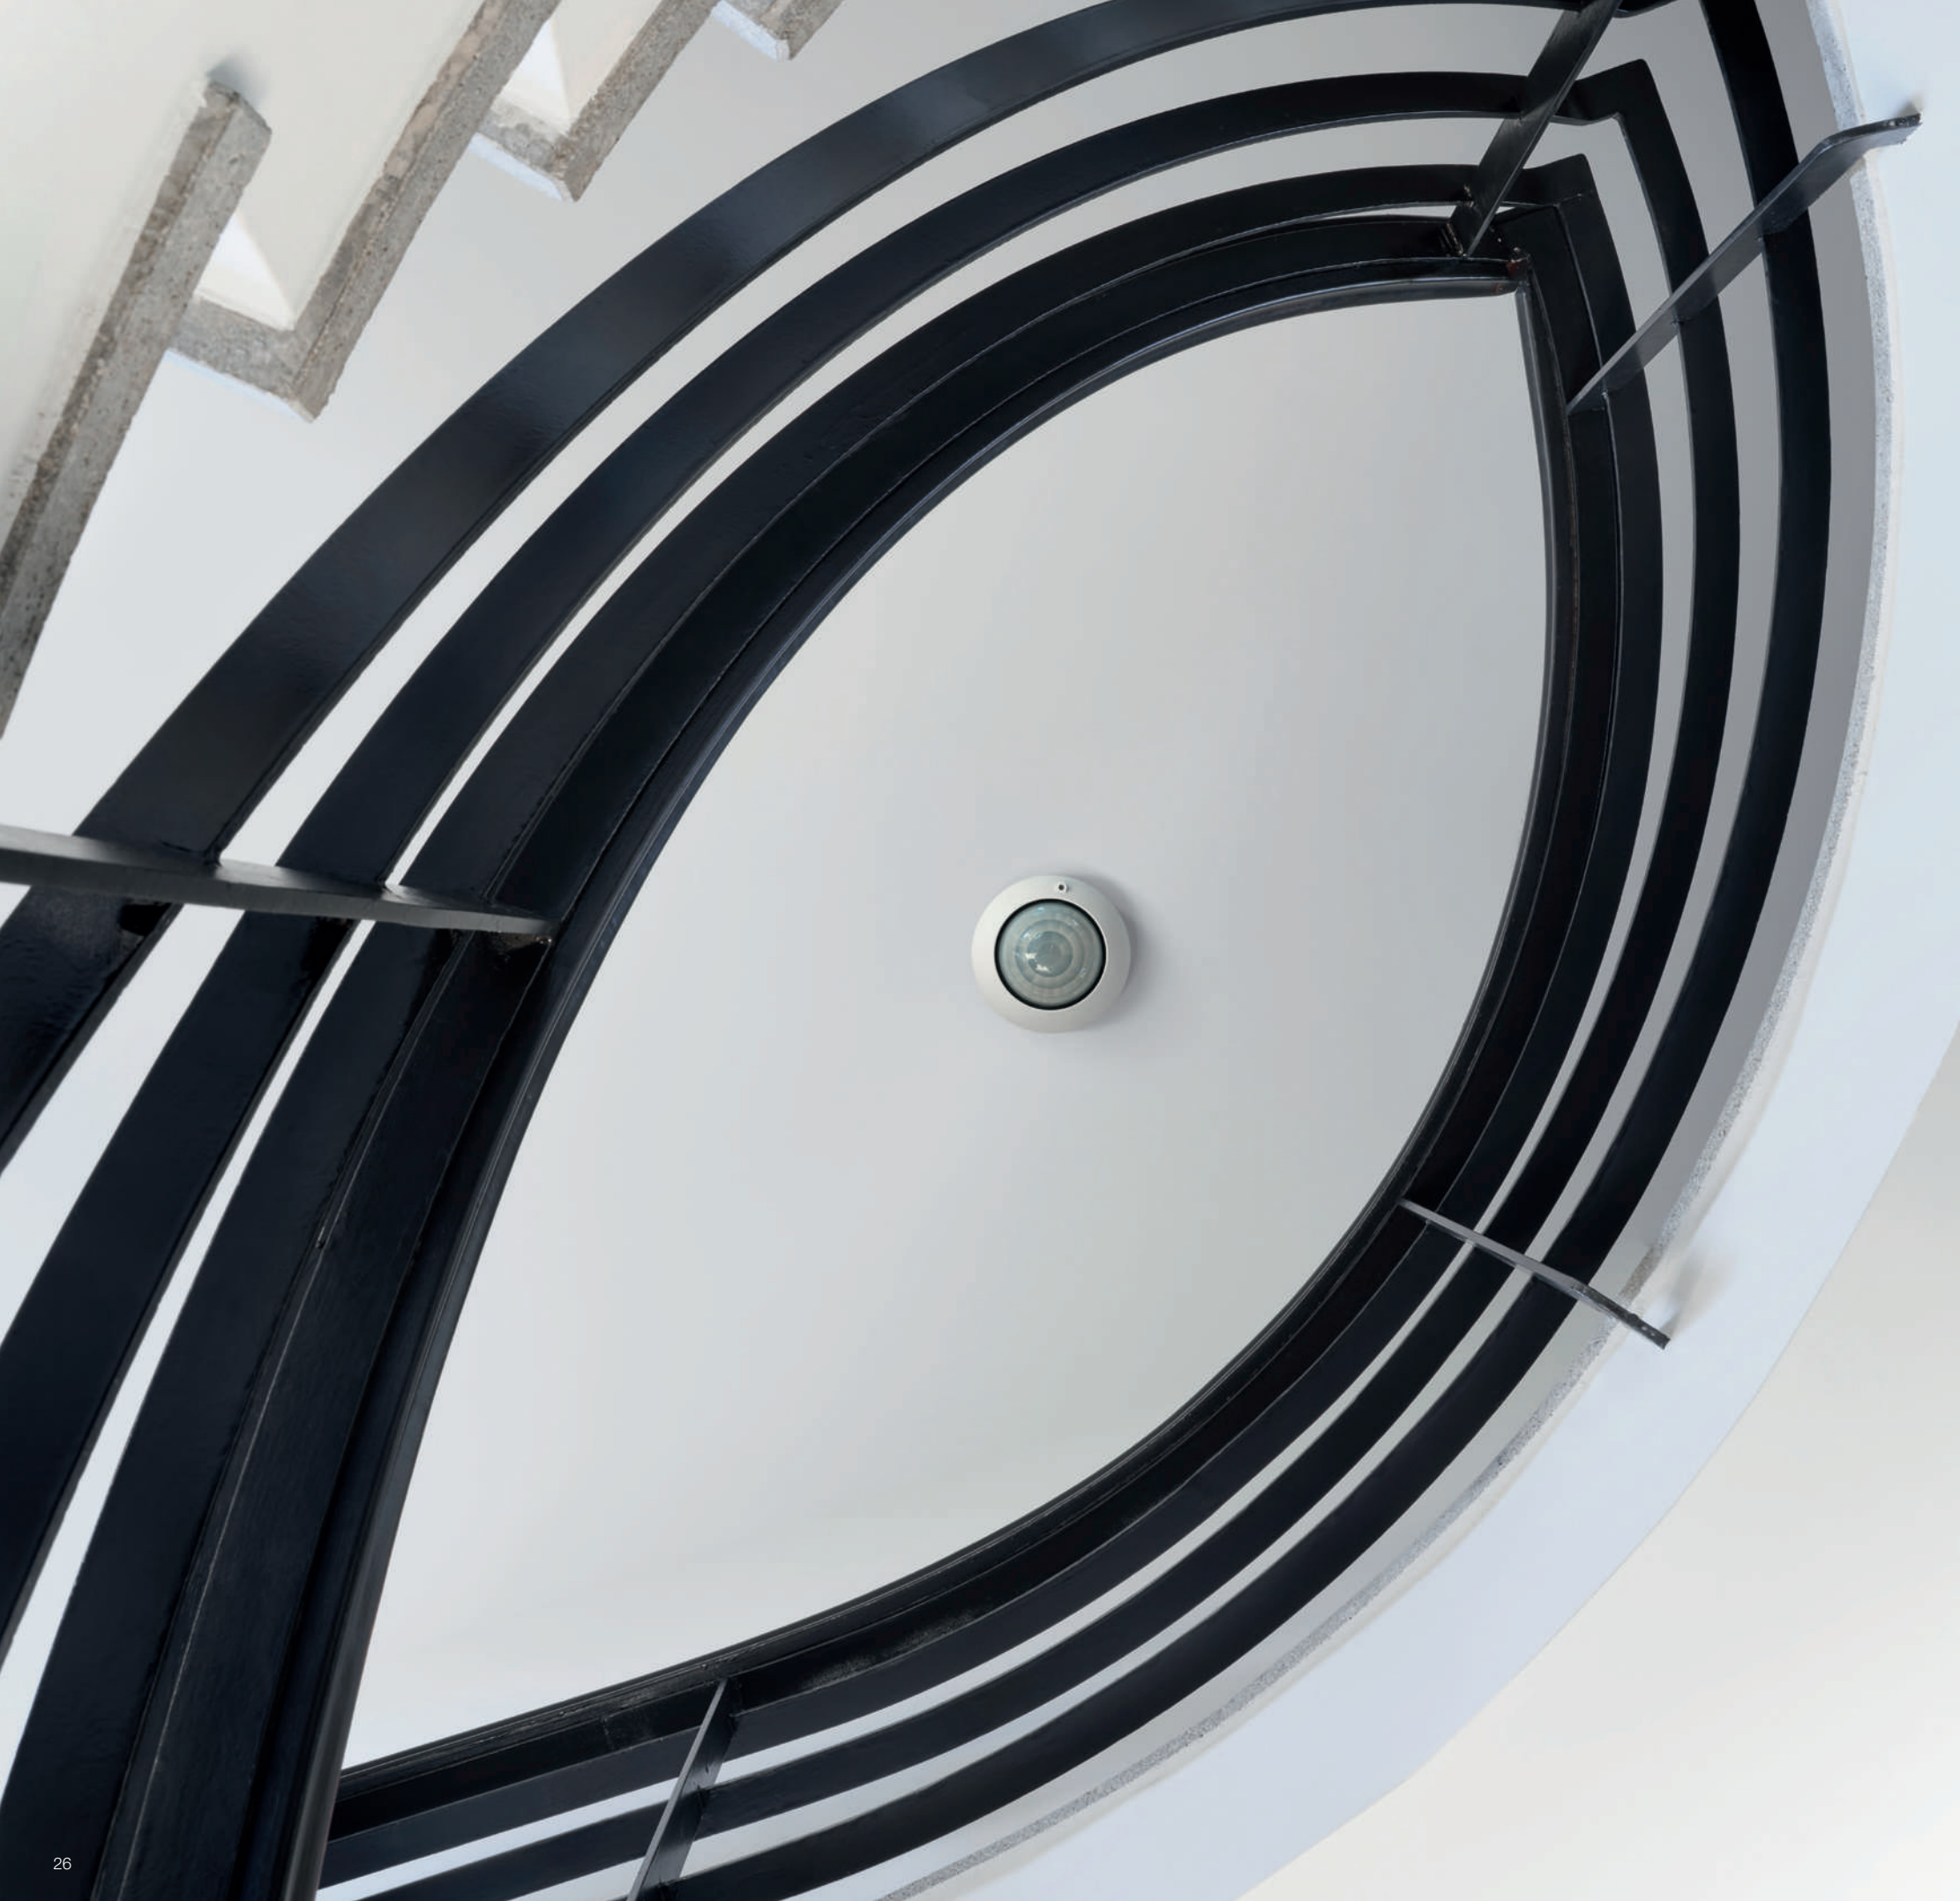

Automatic switching

The light switch function is a classic and practical application of the JUNG HOME motion detector. As soon as you go along the hallway for example, the light there or in other rooms switches on. You can also set beforehand via the app how long the light should stay switched on for. There are two motion detector versions: for mounting heights of 1.10 and 2.20 metres.

Configure with the JUNG HOME app

You simply configure the detection range, run-on time, timer programs and more in the app.

Detect presence

The smart JUNG HOME presence detector is designed for mounting on the ceiling. It has a detection range of 360 degrees. It is therefore particularly suitable for large spaces such as stairwells.

Smartphone instead of ladder

The presence detector can also be conveniently configured according to your requirements.

Hello
IoT world

Extend the system

Via the JUNG HOME gateway, you connect your smart home with the internet. This gives you the option to integrate smart speakers so that you can use voice commands to control your home. You can also make use of a variety of services from external providers such as SmartThings from Samsung, mediola® and wibutler.

Connect JUNG HOME with the internet
The gateway is certified by the VDE Institute and carries the "Smart Home – Information Security Tested" seal.

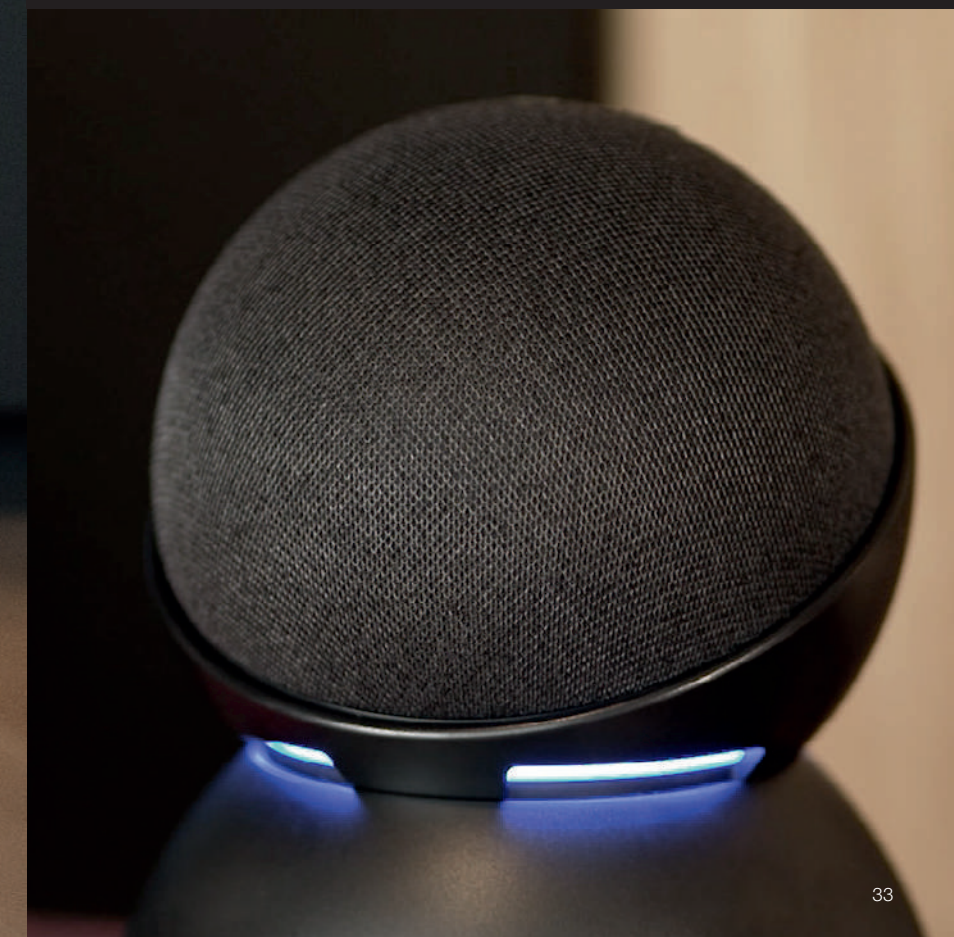

Voice control

With the JUNG HOME gateway, you can use your voice to control all the JUNG HOME products as well as connected smart solutions of other manufacturers. Using the Amazon Alexa or Google Assistant apps on the smartphone, you can also operate JUNG HOME remotely, e.g. regulating the heating via voice commands on the way home.

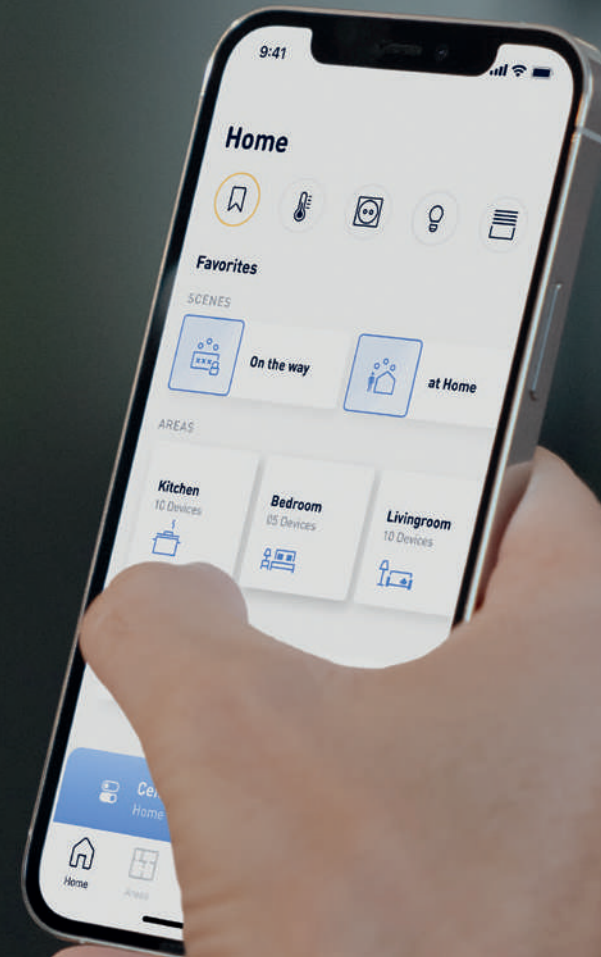

Integrate voice control

JUNG HOME speaks Google and Alexa.

The JUNG HOME app

Operate your smart home, set up scenes or install updates: the JUNG HOME app offers you direct access to all devices. Completely without the internet, WLAN router or server. Everything is very easy as the menu navigation is clear and intuitive. The system is installed and configured professionally according to your requirements. You can extend or change it yourself with the JUNG HOME app at any time.

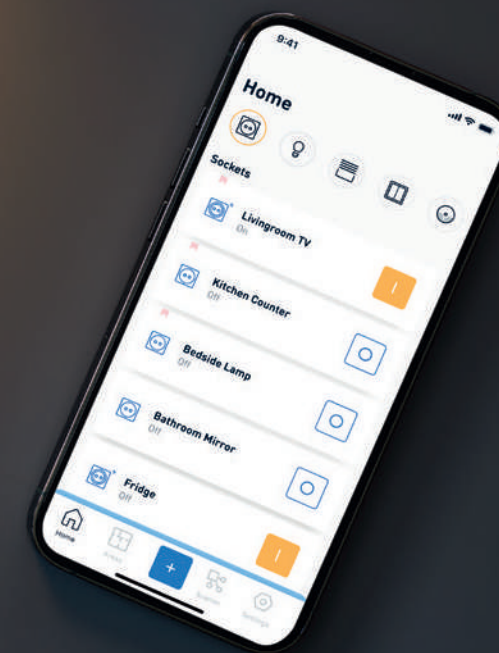

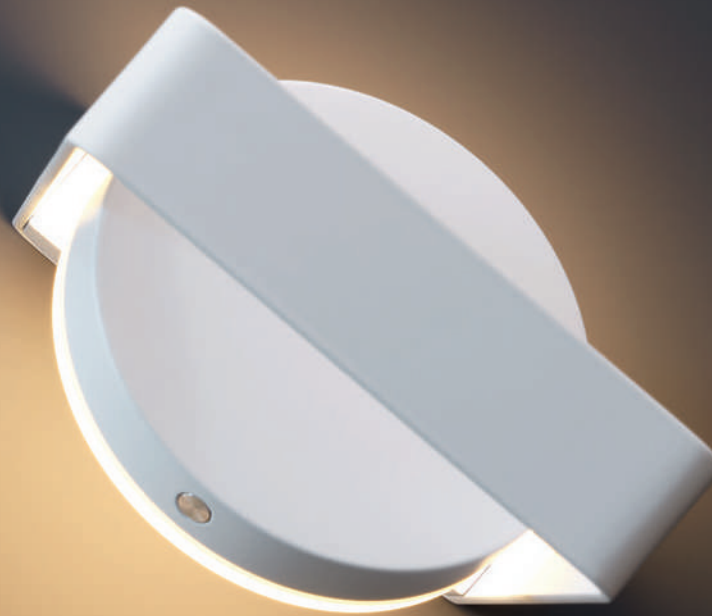

Simply download:

The JUNG HOME app is available in Apple and Google stores.

Inspire with design

The smart JUNG HOME products convince not only due to their clever and user-friendly technology but also due to their aesthetic design. Choose your favourites from the JUNG LS, A and CD switch ranges. Whether it's plastic, metal, glass or a particular colour: with us you will find the right switches for your home.

LS range

Variety squared: narrow or wide frames, plastic, real metal or glass and numerous colours, matt or glossy – the LS range offers timeless switches for every furnishing style.

LS 990

The classic among the flat switches: with particularly narrow frames and maximum operating area, the LS 990 has been impressing owners and architects for more than 50 years.

LS ZERO

Some things stand out because they are unobtrusive. LS ZERO is the consistently flush-mounted switch range from JUNG.

LS CUBE

The solution for all areas where flush mounting is either not possible or not wanted: LS CUBE is the stylish, surface-mounted version of the LS 990 design classic.

LS-DESIGN

A switch range that sets itself apart: with a shadow gap on the rear of the frame, the switches and sockets visually distance themselves slightly from the wall.

LS PLUS

Sets special accents: the conspicuously wide design frames in high-quality glass make switches and sockets from the LS PLUS range an eye-catcher.

Les Couleurs® Le Corbusier

Worldwide exclusive: with LS 990 Les Couleurs® Le Corbusier, JUNG offers light switches, sockets and operating controls in the 63 original colours of Les Couleurs® Le Corbusier.

LS 990

Contemporary styling, a high level of functionality, inspiration of design and sustainable quality combine in a whole. The LS 990- switches meet this aspiration in high-quality metal versions in a special way.

LS 990 in matt graphite black

LS 990 in Les Couleurs® Le Corbusier

Le Corbusier's universal colour system, the Polychromie Architecturale, inspires with a timeless colour palette and noteworthy combinability.

As a worldwide exclusive, JUNG provides light switches, sockets and building technology systems in the 63 colours of Les Couleurs® Le Corbusier. Production is made to order and hand lacquered by experienced specialists – quality made in Germany.

The colour keyboards

Le Corbusier created his system of colours as a tool for architects, interior designers and designers. His timeless colour keyboards have not lost any of their freshness even after 90 years.

A and AS ranges

With frames in plastic or glass, the A range sets fresh accents in the room. The AS range impresses with its wide range of applications.

A 550

The striking lines of the A 550 provide style without compromise. The switch range stands for modern design and complements contemporary furnishing styles.

A FLOW

Discretely rounded frames, angular centre plates: the lines of the A FLOW switch range suit fresh living ideas with a relaxed mix of styles.

A VIVA

The satined glass frames with rounded edges make the surface of A VIVA appear soft.

A CREATION

The design-orientated shape of A CREATION is clear and precise. While the frame lends dynamism to the design, the shadow gap creates spatial depth. The switch appears to float on the wall.

A CREATION

Colour meets materiality: with distinctive glass frames in eight striking colours, A CREATION sets sparkling accents in every room.

AS 500

Light switches and sockets from the AS 500 range are the solution for all areas where functionality and reliability play a particular role.

CD 500 in platinum design

With two versions in anodized aluminium, CD 500 sets accents in every place where the focus is on what is special.

The system works locally with the JUNG HOME app.

Your data stays secure and does not reach the internet.

Automatically secure with 128-bit encryption and authentication.

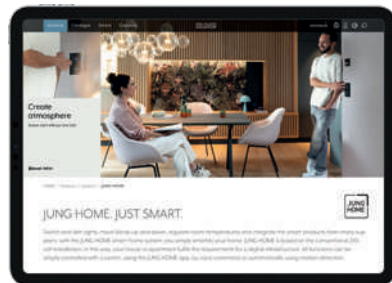

Securely networked

JUNG HOME devices are networked using Bluetooth® Mesh, and the system does not need special cables. Due to the automatic encryption, the worldwide standard makes the wireless data transmission particularly secure. Small to large applications can thus be implemented. And: you can simply extend your smart home. Function for function. Room for room. Floor for floor.

JUNG HOME inspirations

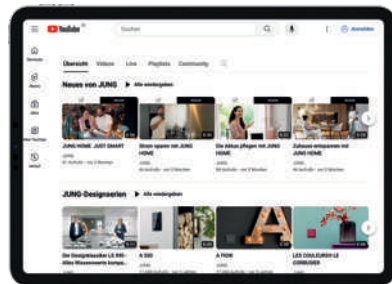

Would you like to immerse yourself deeper in the world of JUNG HOME? Then we have more information for you. On our website, we explain JUNG HOME in detail. Our videos on YouTube also illustrate the possible applications. The JUNG HOME 3D house offers a variety of inspirations and application possibilities. Take a virtual tour and experience a building which is equipped with JUNG HOME from the ground floor to the loft.

The website

Here you find out everything about the JUNG HOME products, about networking with IoT, about design and further topics concerning the application possibilities of our new system.
